

New Computer Overlords?: Responding to Promises and Threats of Machine Learning in Financial Services

March 25, 2019

In The Know

ABA Business Law Section Webinar What happens when machines can make more accurate and insightful banking decisions but do so for reasons humans did not, and in some cases literally cannot, comprehend? Are current model risk, anti-discrimination, and other regulations designed to govern human choices appropriate for decisions made with little or no human input? **Robert Savoie** (Cleveland) will participate in a panel titled “New Computer Overlords?: Responding to Promises and Threats of Machine Learning in Financial Services” for a robust discussion of these issues during an *In The Know* ABA Business Law Section webinar on March 25.
